

## Mega Vertical Lift-Up Door System

**SPEEDO Mega Vertical Lift-up Door System** are specifically engineered for use as a fabric door enclosure to large structures such as chambers and hangers.

It is ideal as a replacement of large steel or roller doors which takes up plenty of surrounding space for operation.

Conventional steel roller or sliding doors are not only heavy and costly but also high in maintenance.

These extremely large openings call for doors which are generally not operated very frequently thus the design of vertical lift door system are specially constructed for large sized opening for chamber . They are manufactured for exact and tight fit to provide improved insulation between blast & paint areas and abrasion from shop blasts.

The vertical lift-up door internal structural design ensures operation even under high wind conditions, and the door tightness dramatically reduces air and dust infiltration, while improving the working environment.

### **Standard Safety Features:**

- ✓ Very cost effective for large openings
- ✓ Simple design and high reliability
- ✓ Works in high wind conditions
- ✓ Requires less maintenance
- ✓ Works in dusty, dirty, grimy environments
- ✓ Customized controls with safety interlocking to prevent slip or accidental release of the door which in up position
- ✓ Upper and lower limit switches to cut-off supply when fully closed or hoist position

**We provides the one-stop solutions on design, manufacture and installation for varies sizes of Mega Vertical Lift-up Door System upon request.**
